*Note:

1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature.
2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uF & 47uF parallel capacitor.
3. Tolerance: includes setup time tolerance, line regulation and load regulation.
4. De-rating may apply in low input voltage. Please check the de-rating curve for more details.
5. In parallel connection, only one unit will operate if the total output load is less than 10% of the rated power.
6. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives.
7. This test is done without enclosure: I/P-O/P 4242VDC. If with enclosure: I/P-O/P 2121VDC,I/P-FG:2121VDC, O/P-FG: 707VDC

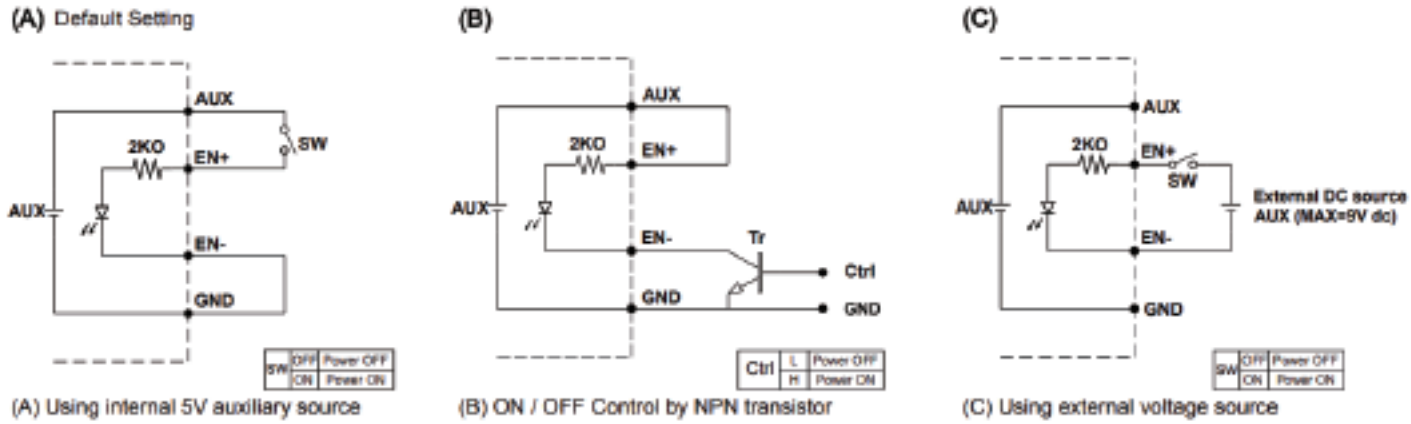
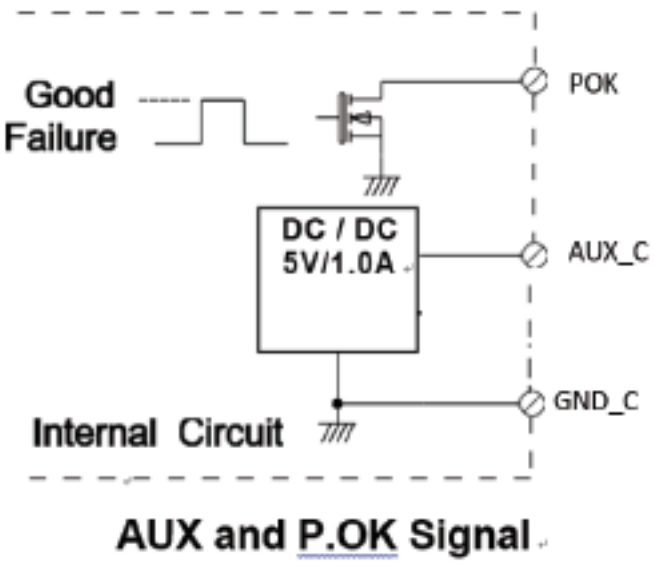
■ REMOTE ON/OFF



(A) Using internal 5V auxiliary source (B) ON / OFF Control by NPN transistor (C) Using external voltage source

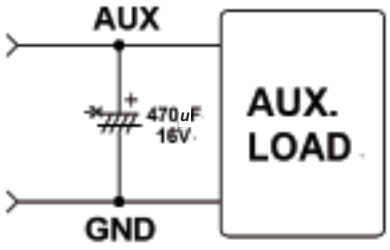
GND shown in above diagram is referring to the GND of the interchangeable interface card, not the Grounding from main power(NEG-).

■ Power OK Signal & Auxiliary Power Setting



AUX and P.OK Signal

Open drain signal low when PSU turns on, Max. P.OK sink current: 20mA, Max. drain voltage: 40V



Do NOT exceed 5V/1.0A

To ensure better auxiliary power operation performance, make sure to install an additional capacitor per diag. as shown above

A23 and A24

The grounding of "AUX" power and P.OK signal should be connected to GND_C port. GND_C & VO- are used for isolation with different voltage level.

C-11

GND shown in above diagram is referring to the GND of the AD-1500 Chassis , not the Grounding from the main power(NEG-)
